

# PUPPY TOILET TRAINING TIPS

Positive reinforcement is the most powerful tool for quick learning. Food, treats and praise are essential.

Start as soon as your puppy arrives. Build good habits from Day One.

A crate, or small confined space can be very helpful to make sure your puppy doesn't have accidents especially when direct supervision is not available.

Know your puppy's toileting schedule. Bring your puppy to the toilet every 2 hours, or just before you expect your puppy needs to potty.

Most puppies gain good potty control by 12 weeks of age. Some learn faster and some are slower. Accidents can happen as they are young and learning. Be patient and kind, and never punish your puppy!
